- Project Management

PROFILE

SERVICES

This leading pharmaceutical manufacturer engaged EAD to find a solution for a pharmaceutical vial tray packaging line where missing product results in non-compliant end product.

The packaging line handled approximately 55 trays per minute with human quality assurance visual checks, and incurred a high number of rejections due to missing vials.

Using vision systems and laser measurement tied into the machine programmable logic controller (PLC), EAD specified, designed and programmed a viable solution that minimized rejects to an acceptable level.

EAD worked closely with the client to ensure the solution was acceptable from production, quality, maintenance and FDA standpoints.
